child's paternal grandmother who threw them into the sea as she pronounced a charm (*ivi-atua*): "Ka oho, kangaro ki hiva!" (May it be lost in a foreign country!) Sometimes the cord was buried under stone, and a charm pronounced over it: "Ka noho hiohio koe i toou kainga!" (May you stay strong in your country!) The land in which the umbilical cord was concealed was tapu; if anyone trod upon it, his legs were covered with white spots (*kino*). Ahu Hanga-varevare, near Tahai, is one of the places where navel cords were hidden. In 1886 Easter Island natives told Thomson that the people who walked over certain rocks near Ana-hoi-hangaroa were afflicted with sore feet. Thomson (215, p. 484) remarks, "We received many solemn warnings in regard to it."

Immediately after birth the child was washed in a large calabash filled with warm water heated with hot stones. According to Knoche (121, p. 660) hot, flat stones were applied to the stomach of the mother after childbirth, to keep the waist without folds. I heard no mention of this custom and the pitiful condition of young women after several childbirths does not testify to the efficiency of this precaution. A woman who has had children is called *heipara*. The same word applies to a plant which produces young shoots.

BIRTH FEAST

A feast was celebrated on the day of the child's birth (*te topanga*). The father's family presented a gift of food to the mother's family. As at the pregnancy feast, the woman ate first or, at her suggestion, her husband started the meal. It was forbidden to cook sweet potatoes in the oven. The oven was tapu and refuse was buried carefully in the ground. Two feasts were given for the first-born child only, whose name was given by the father's brother or sister.

CHILDHOOD

A small child, until he is 6 months old, is a *puepue*; at 6 months he becomes a *poki-tua-huri* (child-who-can-turn). When the child was 6 or 7 months old, his father's brother cut his hair with an obsidian point (*mataa*). At the same time a brother or cousin of his mother gave him a basket containing three or five chickens. This ceremony was called *puoko varu* (hair cutting). When the child began to creep, a maternal uncle gave him a basket with fowls (*kete hakaraka*, basket of crawling). Another present was given to him when he put on his first breechcloth of tapa (*hami-haka-hune*). At 8 or 10 years of age he was tattooed on his legs. At this time his maternal uncle offered him 20 or 30 fowls called *moa o te kona* (fowls for the legs) which became tapu; they could not be eaten by the family but could be traded to a foreigner or transferred to another family, according to the rules of the *koro* (p. 346).

The child was surrounded by many tapus. His head was considered sacred

777 few years before Young's visit, Thomson had purchased from the natives what he calls a "fowl god" (*maea moa*, stone of fowls) which he describes (215, p. 537) as "a beach pebble with slight traces of tool-marks" that was placed under a setting hen before the eggs were hatched. Stones incised with designs of the vulva are common on the island and had no connection with the purported ceremony of the *hakatoro* (stretching of a girl's clitoris) as suggested by Young (229, p. 32). The stretching of the girl's clitoris (*repe*) was not a special rite, but a long process of deformation which lasted for years under the care of the girl's mother. Routledge counted 49 signs of the vulva (*komari*) on the rocks at Orongo and observes that the "*komari* is frequently found on hollow stones and elsewhere" (194, p. 449). The same symbol appears on a stone which was given to Thomson as a fish god (215, p. 537):

778

> This rough, ill-shaped stone was one of the objects really worshipped by the natives. Some of them bear evidences of tool marks, but it does not appear that any effort was made to carve them. These gods were never common, and were possessed by communities or clans [lineages], and not by individuals. The legends claim that they were all brought to the island by Hotu Matua and the first settlers.

In a field near Mataveri we found a large stone, about 3 feet high, on which the conventionalized design of the big-eyed god was carved five times. The location of this stone in the middle of the cultivated grounds resembles strongly the *kumara* gods of New Zealand, which were temporary abiding-places for the *atua* and were placed in potato fields to insure a good harvest.

777 Natives still remember that formerly fishermen carried in their canoes stones selected for their shape which were supposed to bring luck. Some 226 looked like fish, others like cocks, and some suggested the form of a man. They were called *maea ika* (stones for fish). There were special ones called *maea kahi* for the *kahi* fish. These, according to Thomson (215, p. 537), had "no distinguishing characteristics."

777 Amulets were buried in houses. Thomson got a fair collection of them by digging beneath the door posts of ancient dwellings. "The majority are simply beach pebbles; others have been formed by rubbing; and one is a triangular-shaped stone with a face outlined upon it. These were placed beneath the houses, with much ceremony, and were supposed to ward off evil influences" (215, p. 538).

235 Natives frequently offered me stone blocks with natural holes which they called "nests for hens." They insisted that these stones, not unlike enormous egg-cups, were "good" for the hens and caused them to lay eggs. This interpretation was confirmed by the discovery of some of these stones in an old chicken house.

Among the "fetish stones" figured by Thomson (215, pl. 60, fig. 2) there is one identical with five stones in Bishop Museum (B3545) classified as "sharpening stones." All are elongated and have a more or less conical form. The porosity of the stones
